Animesh Renanse

Education

Statistics & Mathematics Unit, Indian Statistical Institute Bangalore, India
Master of Mathematics 2023 - 2025*(expected)*
- Percentage : 91.4

Department of Electronics & Electrical Engineering, Indian Institute of Technology, Guwahati Guwahati, India
B.Tech in Electronics & Electrical Engineering with minor in Mathematics 2018 - 2022
- CGPA: 8.49

Publications and Preprints

1. A. Renanse, A. Sharma, R. Chandra, *Memory capacity of recurrent neural networks with matrix representation*. Neurocomputing, Volume 560, December 2023, 126824, Elsevier.
2. S. Sharma, A. Renanse, *C-triviality of manifolds of low dimensions*. arXiv:2411.05558.

Projects

Intersection Theory in Algebraic Geometry - Fall 2024 *Dr. Suresh Nayak, ISIB*
Covered main results on Chow groups and intersection product from the books by Fulton and Eisenbud-Harris. Serre's Tor formula gives a correct product for properly intersecting cycle which descents to Chow groups via a moving lemma. After calculating Chow ring for $\mathbb{A}^n$ & $\mathbb{P}^n$, ended with geometry and Chow ring of Grassmannians via Chern classes. Report.

Algebraic K-Theory - Summer 2024 *Dr. Rahul Gupta, IMSc*
Studied classical definitions, results and examples of K_0, K_1 & K_2 of a commutative ring with 1 and then studied the first definition of higher K-theory via the $+$-construction on $BGL(R)$. After studying Loday's product in K-theory, ended with homotopy groups with coefficients which is then used to calculate K-groups with coefficients for $\bar{\mathbb{F}}_p$. Gave a proof of the uniqueness of the homotopy type of X^+. Report.

Function Fields & Algebraic Curves - Spring 2022 *Prof. Rupam Barman, IITG*
Studied algebraic function fields of one variable and algebraic curves and showed that they are equivalent. Covered Riemann-Roch theorem for curves and studied ElGamal elliptic curve cryptosystem from the book of Niederreiter and Xing. Report.

Generalized Galois Theories - Fall 2021 *Prof. Rupam Barman, IITG*
Studied Galois theory for finite and infinite dimensional commutative K-algebras for an extension L/K, establishing an equivalence between K-algebras split by L and profinite spaces with $\mathrm{Gal}(L/K)$-action. Ended with an overview of categorical Galois theorem of Janelidze. Report.

Sheaves & Topos Theory - Summer 2021 *Dr. Amit Kuber, IITK*
Studied sheaves and topoi from the book of MacLane and Moerdijk. After studying general results about internal logic in a topos, studied categorical logic and semantics from Johnstone's book and ended by reading the proof of independence of AC and CH via topos theoretic tools. Report.

Memory Capacity of Neural Networks - Summer 2020 *Dr. Rohitash Chandra, UNSW*
After setting up Fisher information matrix for a recurrent network with matrix representations, we generalized some known bounds on Fisher information classically known only in vector representation case. We also introduced a new memory network similar to the classical neural Turing machine but which stores matrix representations and did a comparison on some algorithmic tasks. Paper.

Fellowships

- **M.Math Fellowship.** ISIB, 2023-Present
- **IMSc Summer Research Fellow.** IMSc, May-July 2024
- **Samsung Research Scholarship.** Fellowship for bachelor's thesis. IITG, 2021-2022
- **O.P. Jindal Engineering & Management Scholarship.** IITG, 2019

Talks and Presentations

- **Cohomology long exact sequence for sheaves & Dolbeault's theorem.** Riemann Surfaces Seminar, ISI Bangalore, April 2024.
- **Perverse sheaves : Examples and properties.** Intersection Homology Learning Seminar, ISI Bangalore, March 2024.
- **Memory capacity of matrix recurrent networks.** Transitional AI Seminar, Univ. New South Wales (online), October 2023.
- **Galois theorem for commutative algebras.** DMS Day, IISER Kolkata, February 2023.
- **Introduction to categories.** Indian School on Logic & Applications, IIT Kanpur, May 2022.
- **Memory capacity of matrix recurrent networks.** Machine Learning Research Week, IIT Guwahati, March 2021.

Coursework

Basic courses in Analysis(Multivariable Analysis, Measure Theory), Algebra(Fields & Galois Theory), Topology. Some other graduate courses I have taken are as follows: Topology-II : Homology & CW-complexes, Topology-III : Cohomology & Homotopy Theory, Vector Bundles & Characteristic Classes.

Seminars and Conferences

- Operads in Topology, IIT Bombay, Dec 2024.
- Intersection Homology Learning Seminar, ISI Bangalore, Jan-April 2024.
- Indian School on Logic & Applications, IIT Kanpur, May 2022.

Notes and Writeups

A detailed list of notes and writeups can be found at the webpage here.
